Survey Results on Generative AI Use at Work

Planning Office | September 30, 2026

1. Survey overview

Item	Details
Purpose	Identify how staff use generative AI at work and what they need, as baseline input for reviewing an in-house hyperscale AI pilot
Population	All 412 staff
Period	September 8-19, 2026 (2 weeks)
Method	Anonymous online survey on the company survey system (14 multiple-choice and 2 open-ended questions)
Responses	287 (response rate 69.7%)

- Users are defined as staff who used a generative AI service for work at least once in the past 6 months
- Only users answered the questions on frequency, tasks and time saved
- Only non-users answered the question on reasons for not using it

2. Current use

2.1 Use by department

- 157 of 287 respondents (54.7%) said they have used generative AI for work
- Use rates in office departments range from 56.4% to 100.0%, while the Production team stands at only 22.1%
- The Production team's large share of shop-floor work, with little time at work PCs, is the presumed cause

Department	Respondents	Users	Use rate
Quality team	48	31	64.6%
Design team	62	45	72.6%
Production team	86	19	22.1%
Sales team	34	24	70.6%
Business Support team	39	22	56.4%
IT team	5	5	100.0%
Planning Office	13	11	84.6%
Total	287	157	54.7%

2.2 Frequency of use

- 81 of 157 users (51.6%) use it twice a week or more
- Nearly half of users use it once a week or less, so it has not yet become an everyday work tool

Frequency	Responses	Share
Daily	23	14.6%
2-3 times a week	58	36.9%
Once a week or less	76	48.4%

2.3 Tasks (multiple answers)

- Drafting documents and searching and summarizing material are the top 2 tasks
- Writing code is limited to the IT team and some Design team staff

Task	Responses	Share of users
Drafting documents	98	62.4%
Searching and summarizing material	87	55.4%
Translation	52	33.1%
Generating ideas	41	26.1%
Writing code	14	8.9%

3. Compliance with the security rules

- The current information security rules prohibit entering work documents into external generative AI services
- 201 of 287 respondents (70.0%) said they know this rule
- 86 respondents (30.0%) said they do not know the rule
- 36 users (22.9%) said they have entered work documents into an external service
  - 4 of them said they entered confidential documents
- 58 of 130 non-users (44.6%) named the security rules as their reason for not using it
- The rules hold back use, but some users do not follow them

Reason for not using	Responses	Share of non-users
Not allowed under the security rules	58	44.6%
Not needed for my work	39	30.0%
Do not know how to use it	33	25.4%

4. Perceived benefits and concerns

4.1 Perceived time saved

- 108 of 157 users (68.8%) said they save 1 hour or more a week
- 37 users (23.6%) said they save 3 hours or more a week
- Time saved is the respondents' own estimate and may differ from measured values

Time saved per week	Responses	Share
Under 1 hour	49	31.2%
1-3 hours	71	45.2%
3-5 hours	28	17.8%
5 hours or more	9	5.7%

4.2 Concerns (all respondents, multiple answers)

- Answer accuracy and information leaks are the top 2 concerns
- Concern about effects on performance reviews is low at 12.9%

Concern	Responses	Share of respondents
Answer accuracy	168	58.5%
Information leaks	142	49.5%
Learning to use it	61	21.3%
Effects on performance reviews	37	12.9%

5. Needs

5.1 Support requested from the company (all respondents, multiple answers)

Need	Responses	Share of respondents
An in-house service	176	61.3%
Training	149	51.9%
Usage guidelines	133	46.3%

5.2 Main open-ended responses

- (Quality team) Would like to use it to search past defect reports, but cannot because they cannot be uploaded to external services
- (Design team) Would like to use it to organize design change history and draft change reports
- (Production team) Would like to look up work standards on a phone right on the shop floor
- (Business Support team) No standard for how far it may be used, so staff use it cautiously

6. Implications and next steps

6.1 Implications

- (Demand) A use rate of 54.7% and 61.3% asking for an in-house service confirm demand for use at work
- (Security) 36 users have entered work documents into external services, including cases of confidential documents
- (Guidelines) 30.0% of staff do not know the rules, so guidance on the scope of use is lacking
- (Impact) The time savings are only perceived, so actual measurement is needed during a pilot

6.2 Next steps

When	What	Owner
October 2026	Draft generative AI usage guidelines and announce them to all staff	Planning Office, Information Security
October 2026	Follow up on cases of confidential documents being entered	Information Security
November 2026	Report the in-house hyperscale AI pilot plan (draft) to executives	Planning Office
December 2026	Set training schedules on generative AI use by department	Planning Office, HR
